

DISPLAY SHOWCASE

The OPAL range provides a colourful and informative interface compared to conventional elevator indicators enabling opportunities to promote tenants, building information, events, news and advertising. Our touch screens are made in 15" 15.6" 18.5" 19" 21" and other custom sizes.

The logo for OPAL TOUCH features a stylized icon of a building or elevator shaft on the left, composed of several white squares of varying sizes arranged in a grid-like pattern. To the right of this icon, the word "OPAL" is written in a large, bold, white, sans-serif font. Below "OPAL", the word "TOUCH" is written in a smaller, bold, white, sans-serif font.

# OPAL TOUCH

The 'OPAL Touch' touchscreen solution provides a highly appealing and informative interface in comparison to standard elevator mechanical push buttons. User friendly software allows the owner to change and configure the display layouts without external assistance. The touch technology was developed to comply with the elevator environment whilst maintaining an elegant flush mounted panel sensitive enough to respond to a gloved touch.

Our OPAL touch displays have a host of useful functions, one of which is the Accessibility Mode

This function ensures lift accessibility to a wide range of users.

When the Accessibility button is pressed, the OPAL touch screen changes to blue with a prominent accessibility symbol.

The user is presented with audible and visual cues to choose a floor designation.

By pressing the accessibility button again on the desired floor this will highlight the chosen level for the passenger.

"PLEASE PRESS THE  
BUTTON TO SELECT  
DESTINATION LEVEL"

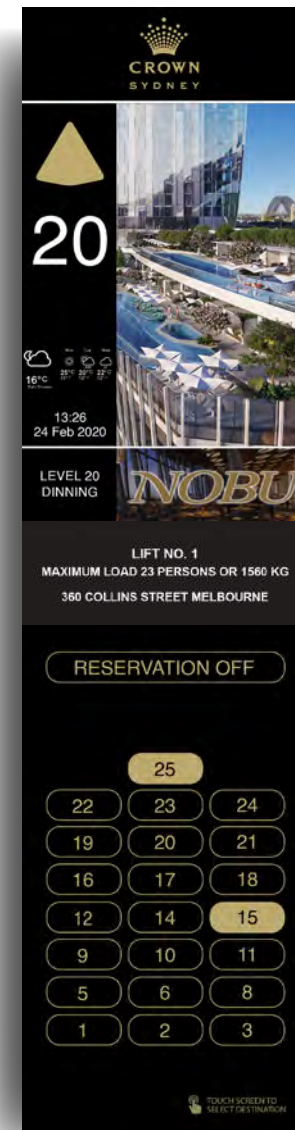

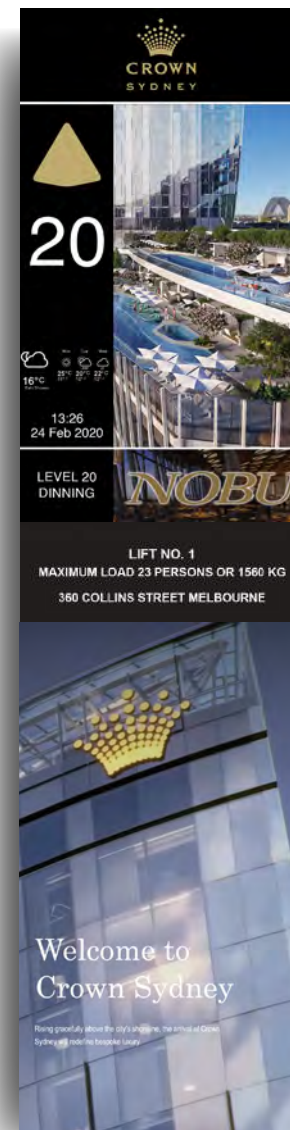

"LEVEL 3 SELECTED"

A Destination control site, The Advertising of the screen is replaced with the touch button when the lift is key'd over to Exclusive service or Fire service mode. Allowing a floor to be selected from within the lift.

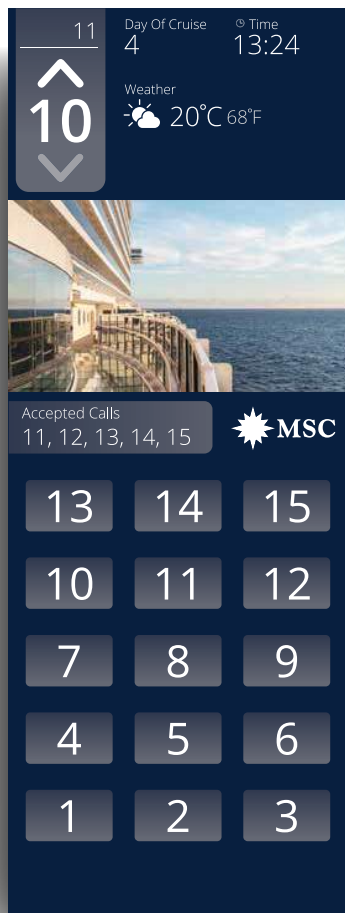

Advertising

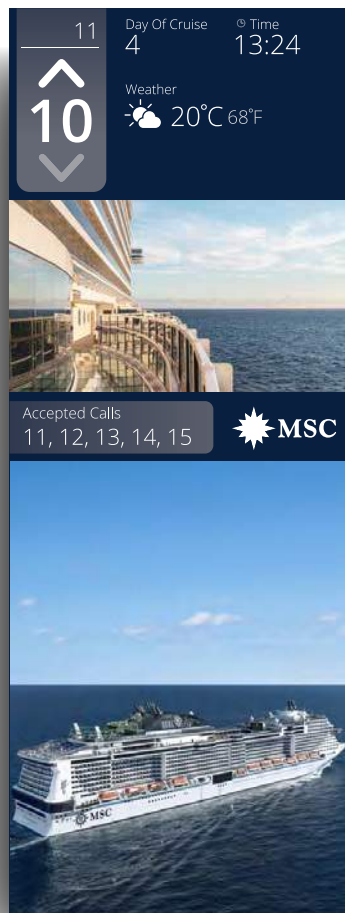

Touch buttons

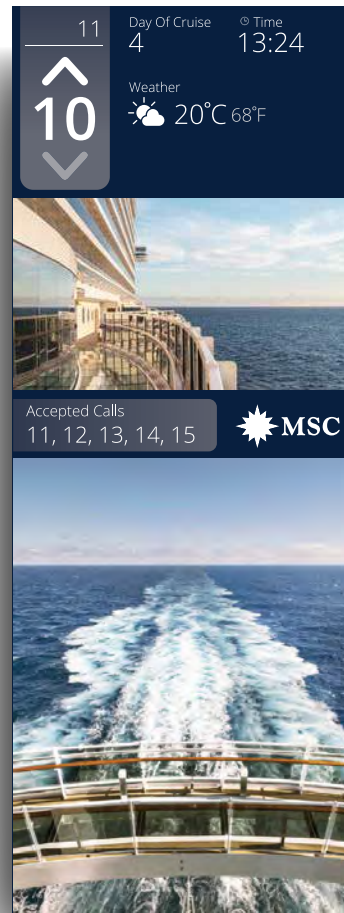

Another destination control site, where again the advertising of the screen is replaced with the touch buttons when the lift is switched over to exclusive or fire service.

Touch button function

Switch to slideshow

Our touch screens are decked out with full multilingual functions when required, this allows easy update of floor tenant details.

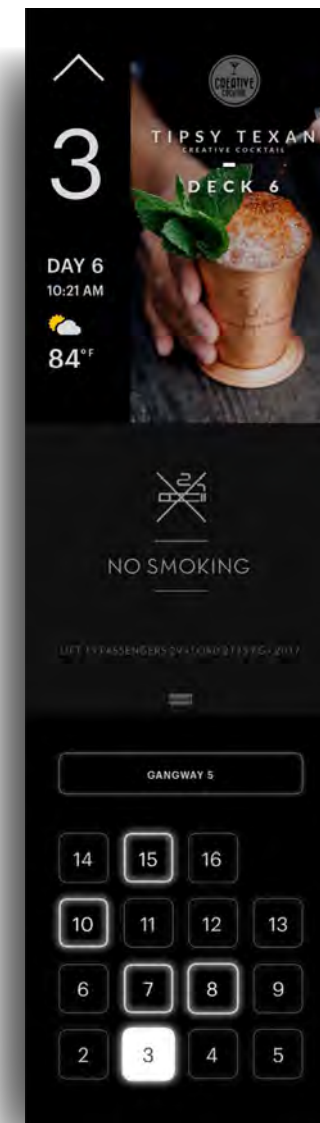

Here at Crown Promenade, we can see an example of the Multi lingual displays which can be switched between English and Chinese as required.

Multi language Displays

Another feature of the OPAL touch is that certain unique buttons can appear under certain conditions.

For instance, RCCL cruises, when the cruise ship arrives at a destination port the gangway button appears on the screen with the suitable level for that port for the user to select.

This unique Touch screen is installed in this destination control site to allow the security staff to interact and make / override calls to the remote goods lift on behalf of its passengers.

(Landscape layout)

As well as touch, we offer unique solutions, including building foyer and directory boards, with elevator directions.

Riverside Centre is a vibrant business hub in the heart of Brisbane's Golden Triangle' precinct. Pixel Technologies manufactured 5 specifically built 46 inch touch screens to display the buildings tenant names.

When touched the screen displays the lift identification and direction to the correct lift to get to the desired tenant or office.

## Touch Display Steps

**Step one:** Walk up to display

**Step two:** select tenant

**Step two:** receive directions

Opal Touch screens are installed and used as destination control screens for every floor landing on this unique building..

Our numeric keypads or specialty floor selections can cater to very tall buildings with large floor levels.

STEP 1:

User is presented with a main screen where floors are grouped together in lots of 10.

STEP 2:

The group of floors the user wants to access are selected.

STEP 3:

User is presented with specific buttons for each floor in that group.

STEP 4:

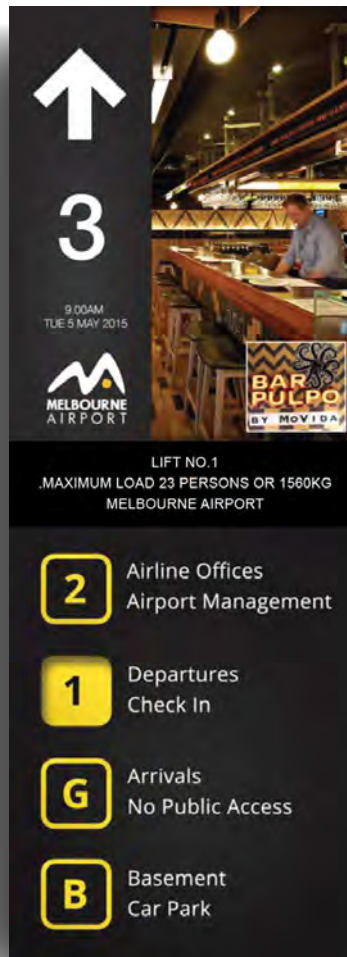

Floor selection is made.

STEP 5:

Screen changes to give user directions to the appropriate lift. Selected floor is confirmed with text.

The lobby display acts as both touch screen to call the lift as well as a digital directory board with details floor information for its passengers to navigate to the correct floor.

Another example of our unique designs, are the touch screens at Federation Square

With our custom designs, our touch displays can cater to the arts and entertainment industry with on brand, highly stylised designs to suit the space. Including media space for advertising, tenant information and corporate branding.

The logo features a stylized icon of a mobile phone keypad on the left, composed of several small white squares arranged in a grid. To the right of the icon, the word "OPAL" is written in a large, bold, white, sans-serif font. Below "OPAL", the word "TOUCH" is written in a smaller, white, sans-serif font.
